CONDITIONAL STATEMENTS PROGRAMS

1. if Statement Programs

Q1. Best Seller Tag Display

Write a Python program to display "Best Seller" if the product sales are greater than 1000.

Test Case 1

Input:

```
1200
```

Output:

```
Best Seller
```

Test Case 2

Input:

```
800
```

Output:

```
No Output
```

Q2. Instagram Verification Status

Write a Python program to check whether a user gets a verified badge.

check whether the account is eligible for verification and Meta Verified subscription is active. If active, display "Verified Badge Granted".

Test Case 1

Input:

```
Eligible Account: True
Meta Verified Subscription: True
```

Output:

```
Verified Badge Granted
```

Test Case 2

Input:

```
Eligible Account: True
Meta Verified Subscription: False
```

Output:

None

Q3. Zepto Rain Delivery Charges

Zepto applies additional delivery charges during rainy weather due to increased delivery difficulty. Write a Python program that checks whether it is raining and displays **"Extra Rain Charges Applied"** if the condition is True. Use an **if statement** only.

Test Case 1
Input:
```
True
```
Output:
```
Extra Rain Charges Applied
```

Test Case 2
Input:
```
False
```
Output:
```
No Output
```

2. if-else Statement Programs

Q1. Username and Password Login

Write a Python program to validate username and password.

Test Case 1
Input:
```
Username: admin
Password: admin123
```
Output:
```
Login Successful
```

Test Case 2
Input:
```
Username: admin
Password: test123
```
Output:
```
Invalid Credentials
```

Q2. Product Search

Write a Python program to check whether a product exists in the available product list.

Test Case 1
Input:
```
Available Products:
Laptop
```

```
Mobile
Watch
Search Product:
Mobile
```
Output:
```
Product Found
```

Test Case 2
Input:
```
Available Products:
Laptop
Mobile
Watch
Search Product:
Tv
```
Output:
```
Product Not Found
```

Q3. Delivery Charge Calculation

A food delivery app offers free delivery for orders above ₹99. If the order value is ₹99 or below, a delivery charge of ₹30 is added to the bill. Write a Python program to calculate and display the final bill amount using an **if-else statement**.

Test Case 1
Input:
```
150
```
Output:
```
Final Bill Amount: 150
```
Test Case 2
Input:
```
80
```
Output:
```
Final Bill Amount: 110
```

3. if-elif-else Statement Programs

Q1. Weekend Planner Based on Budget

Write a Python program to suggest a weekend plan based on the user's budget.

Conditions:

- Budget > 10000 → Trip
- Budget > 5000 → Resort Stay

- Budget > 3000 → Movie and Dinner
- Budget > 1000 → Cafe and Shopping
- Budget > 500 → Street Food and Park Visit
- Otherwise → Stay Home

Test Case 1

Input:
```
12000
```
Output:
```
Plan: Trip
```

Test Case 2

Input:
```
5000
```
Output:
```
Plan: Movie and Dinner
```

Test Case 3

Input:
```
1000
```
Output:
```
Plan: Stay Home
```

Q2. Greeting Based on Time

Write a Python program to display greetings based on the current hour.

Conditions:

- 5 to 11 → Good Morning
- 12 to 16 → Good Afternoon
- 17 to 20 → Good Evening
- Otherwise → Good Night

Test Case 1
Input:
```
8
```
Output:
```
Good Morning
```

Test Case 2
Input:
```
15
```

Output:
`Good Afternoon`

Test Case 3
Input:
22
Output:
`Good Night`

Q3. Hostinger Hosting Plan

Write a Python program to determine the hosting plan based on the customer's budget.

Conditions:

- Above ₹10000 → Cloud Hosting
- Above ₹5000 → Business Hosting
- Above ₹2000 → Premium Hosting
- Otherwise → Single Hosting

Test Case 1

Input:
15000
Output:
Cloud Hosting

Test Case 2

Input:
7000
Output:
Business Hosting

Test Case 3

Input:
3000
Output:
Premium Hosting

Test Case 4

Input:
999
Output:
Single Hosting

4. Nested if Programs

Q1. Instagram Story Visibility

Write a Python program to check whether a user can view a Close Friends story.

Conditions:

- Check whether the user follows the account.
- If the user follows the account, check whether they are in the Close Friends list.
- If both conditions are True, display "Story Visible".
- Otherwise display the appropriate message.

Test Case 1
Input:
Follows Account: True
Close Friend: True
Output:
Story Visible

Test Case 2
Input:
Follows Account: True
Close Friend: False
Output:
Not in Close Friends List

Test Case 3
Input:
Follows Account: False
Close Friend: False
Output:
Follow the Account First

Q2. BGMI Tournament Entry

Write a Python program to check whether a player can join a BGMI tournament.

Conditions:

- Check whether the player has registered.
- If registered, check whether the entry fee is paid.
- If both conditions are True, display "Tournament Entry Confirmed".
- Otherwise display the appropriate message.

Test Case 1
Input:
Registered: True

Fee Paid: True
Output:
Tournament Entry Confirmed

Test Case 2
Input:
Registered: True
Fee Paid: False
Output:
Entry Fee Pending

Test Case 3
Input:
Registered: False
Fee Paid: False
Output:
Registration Required

Q3. Google Drive File Access

Write a Python program to check whether a user can access a shared file.

Conditions:

- Check whether the file link is active.
- If the link is active, check whether access permission is granted.
- If both conditions are True, display "File Opened Successfully".
- Otherwise display the appropriate message.

Test Case 1
Input:
Link Active: True
Permission Granted: True
Output:
File Opened Successfully

Test Case 2
Input:
Link Active: True
Permission Granted: False
Output:
Access Denied

Test Case 3
Input:
Link Active: False
Permission Granted: False
Output:
Invalid File Link
